

Fortcell Feed poultry

NATURAL PRODUCTION IMPROVEMENT EXCELLENT ALTERNATIVE THAN ANTIBIOTICS GROWTH PROMOTERS

BIALTEC has a patented microencapsulation technology that guarantees resistance to industrial and biological processes. Fortcell Feed® Avicultura is designed to increase the response of the immune system, improve digestion and stabilize the microbiota.

COMPOSITION

Contains amino acids, phytobiotics and prebiotics, in addition to a mixture of cooperating strains specific for poultry, with a high degree of fixation to the intestinal epithelium, capable of colonizing the gastrointestinal tract and modulating the immune response, added in doses approved by the European Union . Especially indicated as a growth promoter and control of pathogenic bacteria.

ACTION MODE

- Restores intestinal function in birds after antibiotic treatment.
- Contributes to the protection of intestinal integrity.
- Improves feed digestibility.

ADVANTAGES

- Intestinal integrity promoting effect.
- Improver of production indices both in laying (laying rate, feed conversion and egg quality), and in meat (average daily gain and conversion rate).
- Helps reduce the mortality rate.
- Increases digestibility and assimilation of nutrients, favors the reduction of digestive disorders.
- Helps in the control of Bacteria (control of *Clostridium* spp., *Salmonella* spp., *Campylobacter* spp., *E. coli*, etc.)
- Alternative to the use of antibiotic growth promoters.
- Does not leave residues in the carcass, without withdrawal time.
- Does not generate bacterial resistance, not genetically modified.

DOSIS

300 - 500 g/ton of feed according to farm conditions defined by the technical criteria of Bialtec.

60 g for 300 liters of water

PRESENTATION

To add to the feed: 5 kg, 10 kg, 25 kg.

Soluble: 60g
